

└ The note directive

The note directive

Notes can be included with the `r2b_note` directive.
Multiple notes can be included in one slide.
Slides without any notes will produce an empty note slide.

This is an example.

This is an example of that.

Look at the previous slide for an example of that.

- └ Notes as containers

Notes as containers

The custom r2b directives won't be recognised by any writer other than rst2beamer. Therefore, we allow certain containers (which most other writers should recognise and at worst ignore) to act like notes.

Any container with the name 'r2b_note' or 'r2b-note' will be handled like the notes directive.

Compatibility is important

Important: I must find out why the container names are being munged.
